Evutec Reinvented Wooden iPhone Case with Kevlar Infusion

Evutec's iPhone case is a unique blend of wood and Kevlar, combining natural look with strength and modern esthetics

Jan 12 2014, 9:56am CST | by Bijon Kumar Pramanik

People who like natural materials are attracted to wooden iPhone cases, but until now they were too bulky and rigid. Evutec managed to produce an attractive case that is only 0.7 mm thick. The case is made of several layers of real wood veneer, with an outer shell infused with Kevlar produced by DuPont. The case has a shockproof liner that can be removed. This case is part of Evutec's Karbon S Series.

Unlike other iPhone wooden cases that tend to crack when dropped, this one is very durable and flexible. Because the case does not contain any metal, it does not block Wi-fi, cellular or GPS signals. Apple is selling Evutec's wooden cases exclusively from its [online](#) store. They cost \$39.95. The cases in Karbon SP line are available for iPhone 5 and 5S, in ebony and bamboo. Evutec's "Karbon S" cases are available for iPad mini and latest generation iPads. They are available from the Evutec's [website](#).
