## Minuendo presents the ideal acoustic protection for those who love to live under the counter

EDITORIAL BOARD

1 day ago

Those who regularly attend clubs, festivals and concerts are well aware of the importance of good sound insulation

**dazed and with ears that "whistle"** . To avoid damage, which is often irreversible, for some years now, products have been available for free sale to protect oneself from unwanted tinnitus.

Unlike most of the products on the market, **Minuendo hearing protectors allow you to manually adjust the cut of the sound volume while maintaining a linear frequency response with a clear and natural sound.**

Thanks to a switch it **is possible to easily adjust the sound attenuation level of the earplugs from open (-7dB) to closed (-25dB)** with all intermediate positions to find your ideal sweet spot. Thanks to 11 sets of foam and silicone protectors, they adapt perfectly and comfortably to any type of ear without compromising sound.

Minuendo's wide range of earplugs, unlike custom molded ones, **do not cause sound dispersion when singing or moving the jaw** . In addition, the magnetic locking system of Minuendo allows you not to lose them, offering the possibility of easily securing them around the neck thanks to a strap for easy use at any

time. The minuendo variable filter earphones are the ideal gift for any DJ and musician.
